PROFESSIONAL SUMMARY

Data Analyst with practical experience turning large, messy datasets into clear insights that support real decisions. Comfortable working across Python, SQL, Tableau, Power BI, and time-series modeling. I've worked on projects in areas like electricity consumption forecasting, sports analytics, and public health data, where I cleaned data, engineered features, built predictive models, and created dashboards that explain trends in a simple way. I enjoy breaking down complex findings so teams can act on them, and I'm focused on using data to solve real problems and add measurable value.

SKILLS

- **Languages & Tools:** Python, SQL, R (Basics), Git, Jupyter Notebook
 - **Data Analysis:** EDA, Data Wrangling, Statistical Analysis, Time Series Analysis
 - **Libraries:** Pandas, NumPy, Scikit-learn, Seaborn, Matplotlib, Plotly
 - **Machine Learning:** Regression, Classification, Clustering, Features engineering, Model Evaluation
 - **Visualization:** Power BI (with DAX), Tableau, Excel (Pivot Tables, VLOOKUP, Charts), KPI Dashboards
-

PROJECTS

Electricity Consumption Forecasting

- Analyzed household electricity usage data to understand daily and weekly usage patterns and set the stage for forecasting.
 - Used this dataset due to it featuring real, time-stamped electricity measurements that enabled me to practice full-cycle data cleaning, feature engineering and insight generation.
 - Developed a Python pipeline, cleaning the data, creating lag features, adding time-based columns, and preparing the final dataset for modelling and dashboards.
 - Developed an interactive Tableau dashboard that turned the raw data into easy to explore clear KPIs, trends and insights.
 - Provided a full process that exposed peak hours, unusual consumption behaviour and patterns that can facilitate forecasting models moving forward.
-

EXPERIENCE

Unified Mentor | Data Science Intern

Aug 2025 – Nov 2025

- Explored global trends in tobacco-related mortality by analyzing how age groups, regions and types of diseases lead to rising death rates using Python to provide a summary.
 - Cleaned and prepared multi-year datasets, created derived fields, and used feature engineering techniques to highlight trends that were not present in the raw data.
 - Traced key findings, including countries where tobacco deaths had the fastest increase and demographic groups most affected, so that evidence-based interventions can be framed.
 - Provided a short narrative of results that links the statistical findings with real-world health outcomes.
-

EDUCATION

Bachelor of Science in Information Technology

Nagindas Khandwala College

2021 - 2024

CGPA: 8.36

Higher Secondary School Certificate

Shri Vrajlal Durlabdas Valia College

2019 - 2021

80.17%

CERTIFICATIONS

- Data Science & Machine Learning with Generative AI, NIIT
 - Data Science Job Simulation, British Airways
 - Data Analytics Job Simulation, Deloitte
-
